U.S. patent to Hormann discloses a trolley assembly detachably connected to the chain drive for manual operation similar to that of the applicant's invention.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

In claim 2, lines 1-2, "the feature is:" has been changed to --further comprising--;

In claim 3, lines 1-2, "the feature is:" has been changed to --further comprising--;

In the specification:

Authorization for this examiner's amendment was given in a telephone interview with Mr. Chiara (#52,737) on 9/3/2004.

The following is an examiner's statement of reasons for allowance: the recitation of a trolley member for a garage door opener comprising a trolley body, a connecting rod connected to the trolley body, a gear shaft disposed on the trolley body and rotatably connected to the trolley body, a rack disposed on the trolley body, a gear disposed on the gear shaft, teeth of the gear engaged with teeth on the rack, a spring connected to a spring member wherein the rack has two working positions wherein the first working position has the rack inserted within a slot of a chain link with the spring member urging the rack thereto and a second working position such that the rack is detached from the slot is seen as an unobvious improvement over the art of record.
